**Learning and training 2024**

computational course  
**Computational Systems  
Biology for Complex  
Human Disease**

21-26 April 2024

Wellcome Genome Campus, UK

**Interactive training for functional analysis and interpretation of  
disease data using computational modelling tools**

# Lead Instructor - Dr. Anna Niarakis – UT3 & INRIA, France

Full Professor, HDR  
CBI-CMD, University of  
Toulouse III – Paul Sabatier &  
Lifeware, INRIA, Saclay

<https://cbi-toulouse.fr/fr/equipe-niarakis>

✉ [anna.niaraki@univ-tlse3.fr](mailto:anna.niaraki@univ-tlse3.fr)

 Anna Niarakis

## Research Focus

- Computational Systems Biology for complex human disease
- Disease maps construction and analysis
- Large scale Boolean modeling of signaling networks
- Curation and Annotation of Logical Models in biology
- Digital twins in healthcare

Lifeware *inria*  
informatics mathematics  
Computational Systems Biology and Optimization

# Lead Instructor - Dr. Ben Hall– Medical Physics and Biomedical Engineering University College London

Current:  
UCL, Co-chair Computational  
Cancer Collaboratorium

Previous:  
Royal Society Research  
Fellow/ MRC Investigator  
University of Oxford, Microsoft  
Research

✉ **B.hall@ucl.ac.uk**  
**in Benjamin A Hall**

## Research Focus

- Computational modelling of the early stages of carcinogenesis
- Executable modelling of cancer networks (ion channels, signalling, epigenetics)
- Spatial models of clone competition and expansion
- Molecular modelling of protein mutations in cancer

<https://www.hall-lab.com>

# Welcome!

- Wellcome Genome Campus course on discrete modelling in biology, focusing on network biology & human disease -4 edition!
- Second time in person!
- **Our goal:**
  - Provide a grounding in diverse set of tools from across the field of network biology and discrete dynamic modelling
  - Back tools and approaches with a series of lectures and seminars showcasing success stories from leaders in the field

# Systems biology and biomedicine

- Multiple challenges and opportunities
  - Expansive databases derived from patient data
  - Detailed interaction maps available
  - CRISPR makes genetic manipulation easier and more routine
- Underlying mechanisms remain elusive
  - Necessary for translation and understanding
  - Identify fundamental organisational principles to understand wider systems

# Executable modelling

- Approach building on logical modelling and computer science in formal verification
- Driven by high level abstractions focused on functional activity
- Simplified relationships
- Model checking

# Structure

Keynote Seminars

Flagship successes in the field

Lectures

Introduction and background theory

Practicals and demos

Hands on learning/ introducing tools

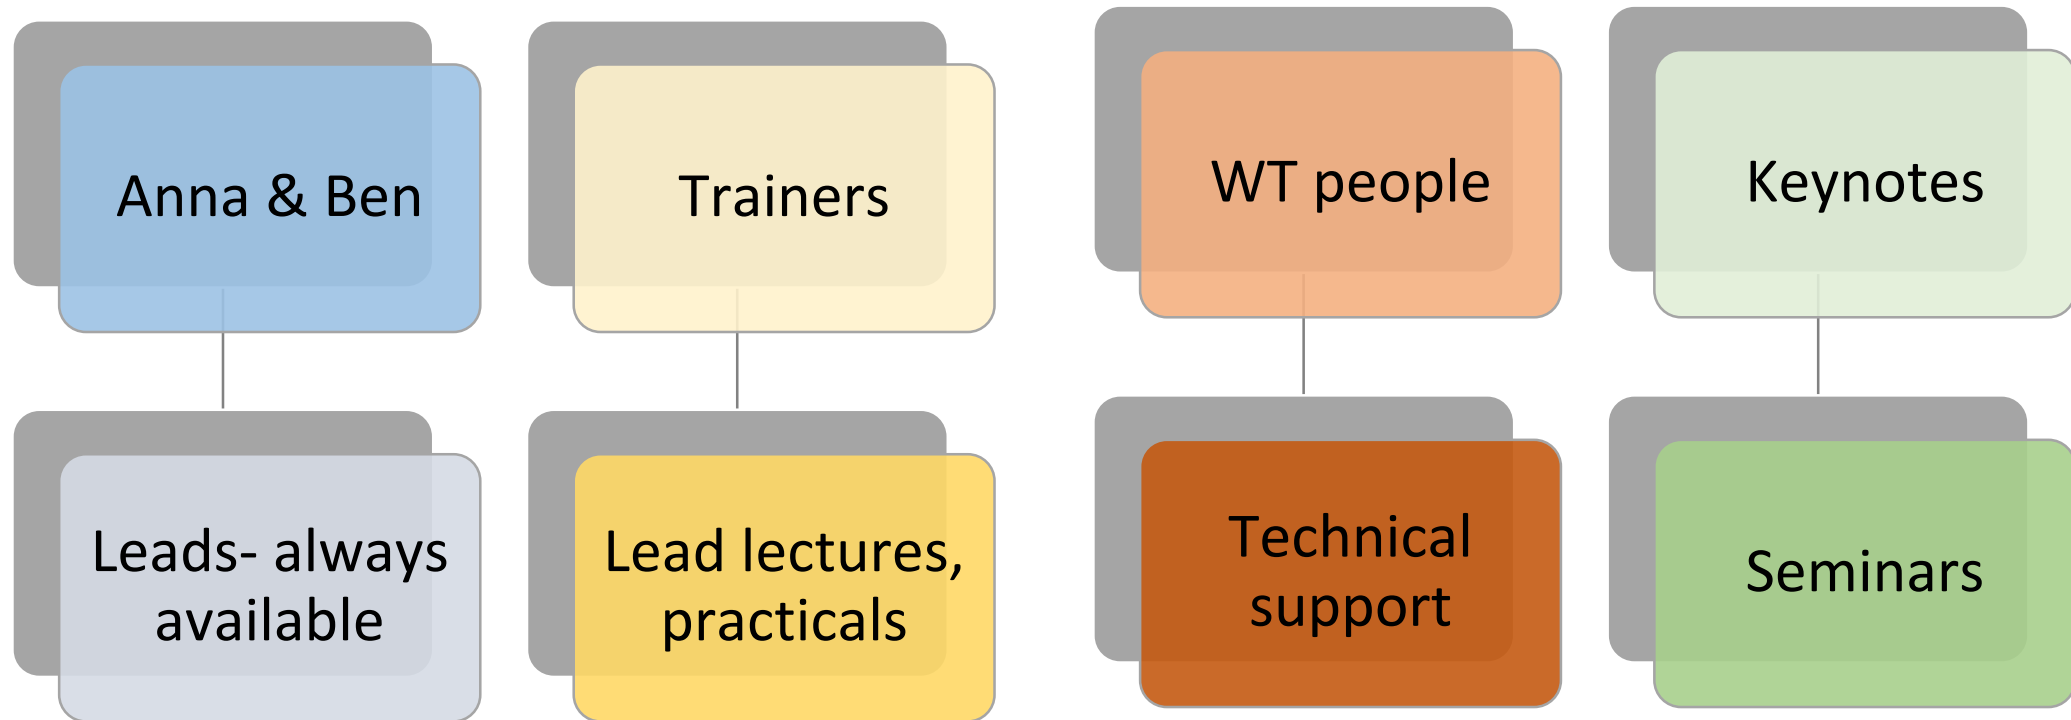

Projects

Application of tools and concepts  
from the course

# Organisation

# Keynote speakers

**Dr Julio Saez Rodriguez**

Prof. Medical Bioinformatics +  
Director Institute Comp.  
Biomedicine @ Heidelberg  
University. EMBL-MMPU group  
leader. Codirector of DREAM  
Challenges

**Dr Liesbet Geris**

Collen-Francqui Research  
Professor in Biomechanics and  
Computational Tissue Engineering  
at the university of Liège and KU  
Leuven in Belgium.  
European Virtual Human Twin  
coordinator

**Dr Henning Hermjakob**

Head of Molecular Systems  
services at EMBL-EBI, which  
provide worldwide reference data  
resources in interactomics (IntAct),  
pathways (Reactome), and  
systems biology models  
(BioModels).

**Dr Jasmin Fischer**

Professor of Computational  
Biology at UCL Cancer Institute

# Trainer - Dr. David Shorthouse – University College London, School of Pharmacy

Lecturer in Pharmaceutics  
UCL School of Pharmacy

✉ [d.shorthouse@ucl.ac.uk](mailto:d.shorthouse@ucl.ac.uk)  
in David Shorthouse

## Research Interests

- Inter-patient heterogeneity in cancer
- Targeting of drug formulations to specific cells
- Modelling of drug delivery
- High throughput screening using robotics
- AI methods in pharmaceutical science

## Trainer - Dr. Sylvain Soliman INRIA-Saclay

Computer Science Researcher (CR)  
Lifeware Team  
INRIA, Saclay

[Sylvain.Soliman@inria.fr](mailto:Sylvain.Soliman@inria.fr)  
<https://lifeware.inria.fr/~soliman/>

### Research Focus

- Computational Systems Biology
- Formal methods and Petri nets
- Boolean and continuous models
- Constraint Programming

Lifeware

Computational Systems Biology and Optimization

informatics mathematics  
*inria*

# Trainer - Dr. Tomas Helikar – University of Nebraska - Lincoln

Associate Professor  
Department of  
Biochemistry

## Research Focus

- Multi-scale modeling of the human immune system
- Software development (e.g., Cell Collective, ccNetViz)
- Hands-on modeling as a method (instead of memorization) to learn about biology in life sciences courses

<http://helikarlab.org>

<https://cellcolective.org>

e: [thelikar2@unl.edu](mailto:thelikar2@unl.edu)

@helikarlab @tomashelikar

Associate Professor  
Department of  
Computer Science and  
Engineering

## Research Focus

- Logical modeling of regulatory networks
- Boolean functions & Formal model revision
- Integration of regulatory / metabolic models
- Software development (e.g., EpiLog, GiNsim)

<http://pedromonteiro.org>

 [Pedro.Tiago.Monteiro@tecnico.ulisboa.pt](mailto:Pedro.Tiago.Monteiro@tecnico.ulisboa.pt)

 [@ptgmonteiro](https://twitter.com/ptgmonteiro)

# Trainer - Dr. Vincent Noël – Institut Curie, Paris

Institut Curie

Computational Systems Biology  
of Cancer

CBIO - Mines ParisTech  
INSERM U900  
PSL Research University

 **vincent.noel@curie.fr**

 **Vincent Noël**

 **@vincentnoel72**

## Research Focus

- Modeling of Biological Systems
- Boolean modeling
- Multiscale modeling
- MaBoSS, PhysiBoSS developper
- High Performance Computing

<https://curie.fr/personne/vincent-noel>, <https://vincent-noel.fr>

# And the WTAC dream team!

[Our events](#) [About us](#)

**Nicola Stevens**

**Course and Event Organiser**

Nicola has been an Event Organiser since 2007. She has previously worked in the audit and risk management department of a large NHS Trust, and prior to that worked in the banking industry for 13 years.

**Martin Aslett**

**IT Manager**

Martin joined the team as IT Manager in 2016. Prior to this, Martin worked in the Pathogen Informatics team at the Wellcome Sanger Institute for 14 years, providing software support for both internal and external users. He has a BSc (Hons) degree in Zoology from Leeds University, and an MSc in Biological Computation from York University.

**Vaishnavi Gangadhar**

Informatics Technical Officer at Wellcome Connecting Science
